

**Department of Artificial Intelligence and Data Science****Vision of the Department**

To be a preferred hub for nurturing computer engineering aspirants through innovative, ethical, value-based technical education, impactful research, and industry collaboration, to become successful professionals contributing for the betterment of society.

Mission of the Department

To nurture computer engineering professionals by offering:

- *Dynamic learning environment that encourages problem-solving using emerging technology*
- *National Education Policy aligned evidence-based technical education, fostering innovation, research, and industry-institute collaboration*
- *Holistic, ethical and sustainable development for lifelong success.*

Session 2026-2027

Vision: Dream of where you want.	Mission: Means to achieve Vision
---	---

Program Educational Objectives of the program (PEO): (broad statements that describe the professional and career accomplishments)

PEO1	Preparation	P: Preparation	Pep-CL abbreviation pronounce as Pep-si-IL easy to recall
PEO2	Core Competence	E: Environment (Learning Environment)	
PEO3	Breadth	P: Professionalism	
PEO4	Professionalism	C: Core Competence	
PEO5	Learning Environment	L: Breadth (Learning in diverse areas)	

Program Outcomes (PO): (statements that describe what a student should be able to do and know by the end of a program)

Keywords of POs:

Engineering knowledge, Problem analysis, Design/development of solutions, Conduct Investigations of Complex Problems, Engineering Tool Usage, The Engineer and The World, Ethics, Individual and Collaborative Team work, Communication, Project Management and Finance, Life-Long Learning

PSO Keywords: Cutting edge technologies, Research

“I am an engineer, and I know how to apply engineering knowledge to investigate, analyse and design solutions to complex problems using tools for entire world following all ethics in a collaborative way with proper management skills throughout my life.” to contribute to the development of cutting-edge technologies and Research.

Integrity: I will adhere to the Laboratory Code of Conduct and ethics in its entirety.

**Department of Artificial Intelligence and Data Science****Vision of the Department**

To be a preferred hub for nurturing computer engineering aspirants through innovative, ethical, value-based technical education, impactful research, and industry collaboration, to become successful professionals contributing for the betterment of society.

Mission of the Department

To nurture computer engineering professionals by offering:

- *Dynamic learning environment that encourages problem-solving using emerging technology*
- *National Education Policy aligned evidence-based technical education, fostering innovation, research, and industry-institute collaboration*
- *Holistic, ethical and sustainable development for lifelong success.*

Session	2025-26 (EVEN)	Course Name	LAB: Optimization Techniques
Semester	7th	Course Code	23ADS1707
Roll No	41	Name of Student	Krishna Mishra

Practical Number	04
Course Outcome	CO1: Understand unconstrained and constrained optimization techniques. CO2: Apply non-linear optimization techniques to solve engineering problems. CO3: Analyze optimization problems using operations research techniques. CO4: Evaluate transportation and transshipment optimization problems.
Aim	To solve a constrained optimization problem using the Lagrange Multipliers Method and determine the optimum value of the objective function.
Problem Definition	Constrained Optimization Using Lagrange Multipliers Method
Theory (100 words)	The Lagrange Multiplier Method is used to optimize a function subject to one or more equality constraints. Consider the objective function: Subject to: The Lagrangian function is defined as: where: $\square$ = Objective Function $\square$ = Constraint Function $\square$ = Lagrange Multiplier The optimum point is obtained by solving: simultaneously.

**Department of Artificial Intelligence and Data Science****Vision of the Department**

To be a preferred hub for nurturing computer engineering aspirants through innovative, ethical, value-based technical education, impactful research, and industry collaboration, to become successful professionals contributing for the betterment of society.

Mission of the Department

To nurture computer engineering professionals by offering:

- Dynamic learning environment that encourages problem-solving using emerging technology
- National Education Policy aligned evidence-based technical education, fostering innovation, research, and industry-institute collaboration
- Holistic, ethical and sustainable development for lifelong success.

Procedure and Execution (100 Words)	1. Define objective function: $f(x,y)=xy$ 2. Define constraint: $x+y-10=0$ 3. Construct Lagrangian: $L=xy+\lambda(x+y-10)$ 4. Find partial derivatives: $\partial L/\partial x, \partial L/\partial y, \partial L/\partial \lambda$ 5. Set derivatives to zero. 6. Solve the equations. 7. Get optimal values: $x=5, y=5$ 8. Calculate objective: $f(5,5)=25$ 9. Display results: Maximum = 25 at (5,5).
	Code: <pre>import sympy as sp # Define variables x, y, lam = sp.symbols('x y lam') # Objective function f = x * y # Constraint function g = x + y - 10 # Lagrangian Function L = f + lam * g # Partial derivatives eq1 = sp.diff(L, x) eq2 = sp.diff(L, y) eq3 = sp.diff(L, lam) # Solve equations solution = sp.solve((eq1, eq2, eq3), (x, y, lam)) print("Optimal Solution:") print(solution) # Objective function value x_val = solution[x] y_val = solution[y]</pre>

Department of Artificial Intelligence and Data Science

Vision of the Department

To be a preferred hub for nurturing computer engineering aspirants through innovative, ethical, value-based technical education, impactful research, and industry collaboration, to become successful professionals contributing for the betterment of society.

Mission of the Department

To nurture computer engineering professionals by offering:

- Dynamic learning environment that encourages problem-solving using emerging technology
- National Education Policy aligned evidence-based technical education, fostering innovation, research, and industry-institute collaboration
- Holistic, ethical and sustainable development for lifelong success.

	<pre>optimal_value = f.subs({x: x_val, y: y_val}) print("\nMaximum Value of Objective Function:") print(optimal_value)</pre>
	Output: Optimal Solution: {lam: -5, x: 5, y: 5} Maximum Value of Objective Function: 25
Output Analysis	The program finds the optimal solution as x = 5 and y = 5 , with $\lambda = -5$. The maximum value of the objective function xy is 25 . The constraint $x+y=10$ is also satisfied. Thus, the maximum value is 25 at (5,5) .
Link of student Github profile where lab assignment has been uploaded	krish-na45/Optimization-Technique-Practicals
Conclusion	The optimal point is ((5,5)) , where the objective function attains its minimum value of 50 .
